RB-LOCKS

RB-LOCKS is the Lock Division of the RB-Group, specialists and manufacturers of residential and commercial doors, lock products and security solutions keeping homes, businesses and institutions safe and secure for half a century. With global presence in 50 countries across five continents, RB-LOCKS targets the needs of locksmiths and lock professionals for reliable total lock solutions in a varying range of security levels; high defense security, commercial and residential.

Total Lock Solutions

RB-LOCKS specializes in providing total lock solutions, offering a large and varied selection of products to answer all locking needs and requirements. Within our product range, you will find multiple types of lock systems, cylinders, keys, locks, lock accessories and hardware. With the wide variety available and our professional support, locksmiths and lock professionals are able to accurately offer the most relevant locking products and full solutions, strengthening their positioning when competing in large commercial and industrial projects.

Superior Quality Products

RB-LOCK products are made from tested raw metal materials (brass, hardened steel, stainless steel and nickel) to guarantee lifelong durability. The updated production line features state-of-the-art fully and semi-automated machinery for absolute precision in cutting, manufacturing and assembly. The in-house testing labs located in each department ensure consistency of quality and accuracy in production. Our lock products are tested before leaving the factory and are compliant to the strictest of International Standards Testing.

Service

We highly value our business partners and as professionals in the field, we are dedicated to customer satisfaction and a consistent positive customer experience. Responsive to the needs of distributors, lock professionals, and their markets, we are able to support ,develop, customize, and provide broader solutions.

Growth, Development and Technology RB-LOCKS expanding facilities and growing capacities incorporate the latest machinery available, specialized automated machinery ensuring precision and accuracy in production for all processes, parts and finished products. Our Research and Development Engineering team is committed to constant improvement of products and processes, while investing time and resources in developing and expanding our product range through new products, solutions and leading security technologies.

The LOCXIS® Technology Platform (patented)

RB-LOCKS premium line, the LOCXIS System, with the patented "active floating pin" technology within the key and cylinder, provides a high-security lock with unparalleled performance in protecting property. Safeguarding entry with patented, complex lock and restricted keys, RB-LOCKS floating pin technology (patent protected until 2030) enables countless possibilities of unique key profile configurations.

The LOCXIS platform, easily installed in new or existing doors, is the right choice for commercial, industrial, institutional and residential uses requiring higher levels of security and entry restriction. LOCXIS is easily integrated into keyed-alike, keyed-different and Master Key systems.

The complex LOCXIS cylinder sets an exceptionally high standard of security. The cylinder features anti-snapping technology and telescopic, stainless steel, anti-drill and anti-pick pins positioned for resistance and protection against drilling and burglary.

Manufactured with precision, the LOCXIS Key delivers maximum durability, easy rekeying and high-security key restriction through the vast number of possible unique combinations with its single or double rows of floating active pins and stainless steel telescopic ball technology. Duplication of keys is restricted and controlled by the individual LOCXIS Duplication Cards supplied with every LOCXIS cylinder, padlock or cam lock and keys can be copied by authorized locksmiths only.

The KEYLOCX[™] Technology Platform

The KEYLOCX system is an ideal high-security lock system for residential and commercial uses, providing outstanding security and protection, restricted key duplication and lasting durability.

Strong, functional and versatile, the KEYLOCX key and cylinder conform to keyed-alike, keyed-different and Master Key systems and can be quickly installed in new doors or doors with existing lock hardware.

For increased key restriction, the KEYLOCX key incorporates RB-LOCKS patented "active floating pin" technology (patent protected until 2030) and through diverse pin combinations, features more than 60 unique key blank possibilities.

The sturdy, seven-chambered KEYLOCX cylinder is manufactured from brass and for further protection and resistance against drilling and burglary, is reinforced with stainless steel anti-drill pins.

The tumbler has been engineered for high performance operation triggered by the stainless steel patented pins in the KEYLOCX key.

The key, cylinder, tumbler, and stainless steel pins have all been rigorously tested for strength, wear and durability.

Duplication of keys is restricted and controlled by the individual KEYLOCX Duplication Cards supplied with every KEYLOCX cylinder, padlock or cam lock and keys can be copied by authorized locksmiths only.

Master Keying Software

RB-LOCKS developed the Master Design Software to provide our customers with an easy-to-use, web-based Master Keying Software.

The Master Design Software is intuitive and easy to use and produces easy to read schemes mapping out your organization's access control through two mathematical structures of Master Key Systems:

1. Hierarchical Master Key System

The structure of this chart, similar to a Corporate Organizational Chart, lays out the organization's authorized key levels and access permissions, starting from the highest master key level and moving down through the levels.

2. Matrix Master Key System

This matrix scheme maps out the organization's access scheme through defining the list of users on one axis and the relevant list of doors on the second axis.

Master Design supports multiple languages.

Accessories & Options

X3 Smartkey

With the X3 Rekeying System by RB-LOCKS, the combination of the existing cylinder can be changed without needing to replace the entire cylinder lock.

Designed for immediate rekeying and entry control, the X3 cylinder allows the combination within the cylinder to be changed by the use of the X3 Key. When a new X3 key is employed, the previous combination in the cylinder is fully altered and replaced by the combination of the new key.

Well suited for the construction industry, the X3 system answers needs for controlled rekeying situations, or urgent changes.

Technical Specifications:

X3 Key Set:

The key set consists of 3 different keys, each with their own key head color and different combination coding. The predetermined order of the keys is set to allow change and replacement of the cylinder's combination. Once the next key of the set is used, the combination of the new key replaces the previous combination in the cylinder. The previous key will no longer open the cylinder.

Easy to use:

To change the cylinder combination, simply insert the new key into the cylinder and rotate until a "click" is heard.

The X3 Rekeying Set includes a unique duplication card with all three combinations.

The X3 is available for a variety of cylinder types:

Euro Profile Cylinder

XBOLT Dead Bolt

Mortice Cylinder

Accessories & Options

Anti Snapping

The Anti Snapping Cylinder has a special slot intentionally designed to break away if the cylinder is tampered with and excessive force or torque is applied.

After breaking, the locking mechanism cannot be accessed while the authorized key will still continue to operate the snapped cylinder.

Emergency Cylinder (pat.pend)

Unique cylinder allowing insertion of keys on both sides of the cylinder and simultaneous operation, activating a "double clutch" mechanism.

Technical Specifications

General	The technology works with Euro-profile cylinders, LOCXIS [®] or Keylocx™ systems, with gear or cam. Emergency cylinders are available with random combination key set, keyed alike or for Master Key systems.
Suitable for	Residential Institutions Hospitals Schools Nursing homes Etc.

XBOLT Dead Bolt (Pat.Pend)

XBOLT[™], RB-LOCKS[®] automatic interlocking mechanism which secures itself to the door frame when the bolt is in the locked position.

The XBOLT[™] deadbolt cylinder is secured by the LOCXIS[®] key system technology.

The XBOLT[™] is Security listed by the American standard UL437 and UL10B.

Technical Specifications -

General	Patent pending tubular lock exclusive to RB-LOCKS. When bolt is in the locked position, the XBOLT [™] interlocks with the door frame. The lock is operated by RB-Locks Locxis [®] cylinder and can be applied to various systems, including; keyed different, keyed alike, master keyed and X3 rekeying platform.		
Operation	Single cylinder with interior thumb turn, or, double cylinder for key operation on both sides. Keyed alike possible for both deadbolt lock and the door's main cylinder. Adjustable backset bolt from 2%" to 2%".

Operation	45° cam rotation by operating key
Material	Body and plug: Brass Lock case: Steel Latch: Cast Zinc Alloy Pins: Stainless steel Accurately machined telescopic pin system, allows building complex master systems.
Finishes available	Nickel Satin (US15)
Cylinder platforms available	Locxis
Applications	Keyed Different Keyed Alike Master Keyed X3 Smart key

Arcalod

Locking system for rear and/or side doors for vehicles.

The cylinder is protected by a rosette and a sliding dust shutter made from top quality, highly corrosion-resistant stainless steel.

The cylinder is based on the Keylocx platform, rotating the locking cam 90 degrees between two fixed positions: locked and open. The cam lock remains locked after key extraction in both positions.

Technical Specifications -

Hasps

Secure housing for padlocks with removable shackle. The hasps may be welded or bolted to steel, wood or aluminum structures.

Technical Specifications -

Materials High quality steel investment casting

Options Three sizes to fit the 10, 13 and 16 removable shackle padlock series

Hasps dimensions Padlock 10: 80/95/40 mm Padlock 13: 90/109 40 mm Padlock 16: 110/116/48 mm

Technical Drawings

Size Chart

Hasp No.	A (mm)	B (mm)	C (mm)
10	80	95	40
13	90	109	40
16	110	116	48

Shackle Protector

Solid shackle protector for additional protection and enhanced security for removable and pop-up shackle padlocks.

For pop-up shackles

For removable shackles

Technical Specifications -

Dimensions	See table
Options	Suitable for 10, 13 removable or pop-up shackle padlock types
Materials	Cast Iron
Finish	Black coating

Upper Locks - Safe Locks

Security lever lock for wood and steel doors. Safe lock with rounded outer trim, suitable for installation-ready RB steel door or any other wood/steel door, includes drill resistant plate option.

Uses	Upper Mortice lock providing horizontal locking of thick bolts, designed to be used as an additional lock in the upper part of the door.
Operation	Double-sided safe key
Materials	Body: Stee Pins: Steel Drill Resistant plate (optional).

Finishes Nickel Chrome (US26) coated outer trim, square or rounded, according to existing installation conditions of door.

Safe lock with square outer trim

Multi Point Locks - 507, 606

Specifically designed for RB Security Steel Doors to provide multi bolt locking.

May be used with any wooden or hollow metal door.

Technical Specifications -

Operation	507: 4 bolts of 10 mm each 606: 3 bolts of 13mm each
Operation	Performs geometric locking Operated by cylinder with gear (10 teeth). Latch is reversible for left or right doors.
Materials	Case, mechanism and bolts: Steel
Finishes	Side strip and bolts: Nickel Chrome (US26)

Multi Point Lock with Monitoring Function

A Multi Point lock with a high endurance micro-switch for detection of lock position (complete bolt extension).

The signal (opening or closing an electric circuit) can be sent to any desired destination, via a cable passing through the case. Specifically designed for RB Steel Doors to provide multi bolt locking.

Technical Specifications -----

Operation	Locked/Unlocked Indication. Performs geometric locking. Operated by RB Cylinder with gear. Latch is reversible for left and right doors. 110VAC, 220 VAC; 12 VDC; 5A max
Materials	Case, mechanism and bolts: Steel
Finishes	Side strip and bolts: Nickel Chrome (US26)

Fast Opening (Panic) Muli-Point Lock (Patented)

Specifically designed for RB Steel Doors to provide Multi Point emergency opening without using a key or knob by simply pressing the handle.

Technical Specifications -

Operation	Unlock and unlatch the lock from the interior side by operating the handle only. Suitable for use with thumbturn or RB emergency cylinders with gear (10 teeth). Performs geometric locking. Latch is reversible for left and right doors.
Materials	Case, mechanism and bolts: Steel

Finishes Side strip and bolts: Nickel Chrome (US26)

R80 Lock

Complete kit for easy installation on doors, suitable for steel and wooden doors as main or secondary lock.

Technical Specifications -

Mortise Lock - 100 Series

Mortise lock for installation on aluminum/metal doors with narrow profiles, with reversible latch for left or right door directions.

Technical Specifications

Operation	Euro profile cylinder
Materials	Steel/square outer trim
Finishes	Nickel

Mortise Lock - 101 Series

Mortise lock for installation on aluminum/metal doors with narrow profiles in 20/25/30/35 mm dimensions. The lock includes a reversible latch for either left or right door directions.

30 mm

101 Cylinder

Technical Specifications

Operation	Euro profile cylinder
Materials	Steel/square outer trim
Finishes	Nickel
